SIEF Information Letter 2 Synthetic Amorphous Aluminate Silicate (AS1) & Synthetic Amorphous Silicic Acid, Aluminium Salt (AS2): LoA Agreement / -Cost

Dear SIEF members,

With this SIEF Information Letter the SASFORREACH Consortium (“Consortium”) would like to inform all SIEF members about the cost for the joint registration of

Synthetic Amorphous Aluminate Silicate (AS1), EC # 215-475-1, CAS # 1327-36-2

and

Synthetic Amorphous Silic acid, aluminium salt (AS2), EC # 215-628-2, CAS # 1335-30-4

The price for the letter of access (“**LoA**”) to the joint registration dossier for **Aluminate silicate (“AS1”) & Silic acid, aluminium salt (AS2)** depends on the tonnage band for which a registration is made and has been calculated on a preliminary basis as follows:

> 1000t/a	€ 45,228.39 (including read across fee for SAS)
100 - 1000t/a:	€ 45,228.39 (including read across fee for SAS)
10 - 100t/a:	€ 28,182.10 (including read across fee for SAS on needed data, reduced read across fee)
1 - 10t/a:	€ 5,682.10

The LoA costs for AS1 and AS2 are the same as the studies are used for both and thus we refer in the below text only for simplification reasons to AS.

After receipt of payment for the LoA, the lead registrant will provide purchasers of a LoA with a complete registration package, including a Letter of Access to the technical part of the dossier (parts 4 – 13) and the Chemical Safety Report.

For **AS1 & AS2** the Guidance on safe use (chapter 11) is submitted jointly on behalf of all consortia members. Therefore it is possible that all further co-registrants can refer to this document.

The Consortium will ensure full compliance with applicable REACH and other EU legislation.

The Consortium published some info and a short guidance for the registration of **AS1 & AS2** on the homepage of the Consortium [<http://www.reach-sas.org/>].

Please bear in mind that a large number of studies/actions which are included in the cost calculation document for **SAS (Synthetic Amorphous Silica)** were also necessary for the successful registration of **AS1 & AS2**, thus the price of the LoA for **AS1 & AS2** needs to take these costs into account in addition to the costs for the **AS1 & AS2**-specific studies. The LoA agreement defining the terms and conditions under which a LoA will be issued is a standard document which is not subject to negotiation.

Please also note that the costs for the LoA could only be calculated on a preliminary basis at this time, thus a final calculation may lead to additional charges or reimbursements. A final calculation will be prepared after the expiry of the last REACH registration deadline in 2018 and all purchasers of a LoA will be billed for outstanding costs.

With kind regards

SASFORREACH Consortium representing Aluminate silicate (AS1) & Silicic acid, aluminium salt (AS2)

Patrick Wellmann
